

If off-road means: fields, beaches, forest, narrow passage, though, muddy and rocky terrain, the RZR has the power and the ground-clearance to get you there.

This compact 4-seater atv vehicle can be equipped with a great variety of camera-(gyro)systems, like Mini U-Crane Arm, BlackArm and Shockabsorber with Shotover of Flighthead.

All this can be operated from within the vehicle in comfortable bucket seats, with a wide variety in power supplies, video connections and monitors built in.
